

## 122<sup>nd</sup> International Workshop on HRR and O2k-Fluorometry and TRACT training course

2017 June 26 - July 01  
Schröcken, Vorarlberg, Austria

TRACT

The **122<sup>nd</sup> Workshop on High-Resolution Respirometry (HRR)** is the **37<sup>th</sup>** International Oxygraph Course held in Schroecken since 1988. We provide an overview of the **Oxygraph-2k and O2k-Fluorometer**, with real-time analysis by **DatLab 7 (new)** and applications of the **TIP2k**. O2k-Demo experiments show the unique advantages and limitations of simultaneous monitoring of oxygen concentration, respiration, hydrogen peroxide production or mt-membrane potential. HEK 293T cells are used as a biological reference sample, which can be stored and shipped on dry-ice – introducing the MitoFit Proficiency Test. **Instrumental setup** and service of the polarographic oxygen sensor (**OroboPOS**) are demonstrated, followed by hands-on practice in 10 teams. A wide range of mitochondrial topics is covered; abstracts and experimental experiences are presented by participants.

IOC participants invariably asked for a detailed discussion of protocol design. The **Blue Book** provides a basic introduction to mitochondrial physiology and is complemented by overview presentations with examples, including **DatLab Analysis** of demo files. **Instrumental quality control** is a fundamental component of HRR and will be put to the practical test in teams using seven O2k (14 chambers). The **O2k-MultiSensor** and particularly O2k-Fluorometry has become an integral part of the O2k-Workshop. Optimization of protocol design for various O2k-MultiSensor applications helps to critically evaluate basic principles of mitochondrial physiology. You will also see the **Titration-Injection microPump TIP2k** with feedback-control in action and practice its simple and automatic operation.

Lunch breaks provide an opportunity for relaxing Walks & Talks, enjoying the refreshing scenery of the secluded alpine environment or using spare time for individual practice. Join for a visit to the *Alpmuseum*.

## COST Action CA15203 Mitochondrial fitness mapping

**MITOEAGLE:** Evolution - Age - Gender - Lifestyle - Environment

The MITOEAGLE Network aims at:

- Improving our knowledge on mitochondrial function in health and disease with regard to **E**volution, **A**ge, **G**ender, **L**ifestyle and **E**nvironment
- Interrelating results of studies performed world-wide with the help of a MITOEAGLE data management system
- Providing standardized measures to link mitochondrial and physiological performance to understand the myriad of factors that play a role in mitochondrial physiology

Join the **COST Action MITOEAGLE** and contribute to the quality management network: <http://www.mitoglobal.org/index.php/MITOEAGLE>

## MitoFit in health and protective medicine

**MitoFit** develops novel laboratory standards and diagnostic monitoring of a mitochondrial fitness score. MitoFit provides a signature for high-end health tourism, introducing a scientific perspective on the benefits of mitochondrial fitness.

The O2k-Core and O2k-Fluorometer represent the gold standard for generating reliable quantitative respirometric data to develop the MitoFit Knowledge Management Platform (KMP) and MitoFit database.

- **Reference sample of cryopreserved mitochondria:** The availability of a reference sample for respirometry will provide enormous benefits for scientific research and open up new perspectives on clinical applications. Its use enables a new level of quality control in respiratory studies to be attained.
- **MitoFit proficiency test:** A ring test allows evaluation of the proficiency of a laboratory by measuring respiration of reference samples at pre-defined times and following standard experimental protocols. Reporting the reproducibility of measurements is a quality control for the evaluation of compliance with defined standard requirements.
- **MitoFit test on human blood cells:** Tissue biopsy for the study of mitochondrial function is a practical but invasive approach. Measurement of mitochondrial performance in human blood cells allows a non-invasive sampling procedure, enabling collection and cryopreservation of samples for later measurement and analysis. This will widen the applicability of respirometry for the study of human physiology immensely, permitting routine screening and repeated monitoring of the MitoFit score.
